MODULANT AND ETL SOLUTIONS ANNOUNCE OEM AGREEMENT

Modulant Partners with ETL Solutions to provide complete Data Migration solution

Bangor, UK – Aug 28th, 2007 – Modulant, a leading provider of technologies and services to ensure business information integrity through providing transparency to how, where and when data is used within the enterprise, today announced an agreement with ETL Solutions, a leader in innovative data transformation, to OEM ETL Solutions' Transformation Manager product as part of Modulant's Contextia Product Suite.

"We are delighted ETL and TM have been selected by Modulant and it demonstrates the strength we offer in terms of handling more complex data integration coupled with the flexibility to fit the way Modulant want that is inherent in our solution. We were able to deliver a complete solution both product and expert team" says Karl Glenn, Business Development Director at ETL Solutions. "The existing value they provide their customers is only enhanced by this partnership and we are thrilled to be helping them more completely service their highly regarded Fortune 500 customers."

Migration of data from legacy data stores to enterprise applications like ERP, PLM, and CRM is costly, time consuming, and error-prone. Modulant's Contextia methodology clearly identifies voids and inconsistencies in the information which lead to integrity issues. Contextia can go one step further and actually capture restrictions or rules that are placed on either the information or the context of the information. The result is an efficient, cost effective, and accurate process for collecting corporate knowledge and ensuring business information integrity. With the Contextia Product Suite, Modulant has the ability to provide organizations with complete solutions for large complex data migration projects.

"ETL (Extract, Transform, and Load) Transformation Manager is a perfect fit with our existing product set," said Peter Everitt, Sr. Vice President and Chief Technology Officer for Modulant. "We have taken our ability to ensure the transparency, traceability and integrity of the

information and combined it with ETL Solution's high performance physical data transformation solution to offer our clients the industries strongest data migration solution.”

About Modulant

Modulant's *Contextia Business Maps*™ create a common view or shared perspective of the information used by the enterprise to support its business operations. By making sure knowledge of how the information is used by the business is accessible; Contextia enables IT to be agile, adaptable, and innovative in meeting business objectives. This common view increases information visibility, ensuring information integrity, and allows for automation of business processes. Established in 1989, Modulant has a track record of success within multiple industry sectors including manufacturing, energy, defense and aerospace, logistics, travel & transport, and financial services. www.modulant.com

About ETL Solutions

ETL Solutions Ltd is committed to providing the best Data Integration software product available coupled with a professional services and support team second to none.

ETL Solutions Ltd is a unique independent company with a single focus: to provide the most effective tool and services for users to develop, build, test and maintain data transformation and integration solutions that reduce the business costs and time to market of data dependent systems.

ETL Solution's software enables the easy creation, integration and maintaining of ETL and integration components in the most open standards based and vendor neutral ways possible. Our next-generation meta-data driven code generator product suite Transformation Manager (TM) offers its users a step change in the project process, their development productivity and effectiveness. www.etlsolutions.com
